Application Story

Yuanlin Christian Hospital - A Benchmark for Intelligent Hospitals

Yuanlin Christian Hospital (YCH) is a new medical institution that is affiliated with the Changhua Christian Hospital and holds a significant place in the history of medicine in Taiwan. Specifically, YCH was the first hospital to realize intelligent patient services, medical procedures, and energy management. The hospital not only provides all the convenience and functionality of a modern healthcare facility, but also marks Taiwan's transition into an era of fully intelligent medicine.

Intelligent ward bring patients and nurses closer together

Traditional wards typically feature nurse call buttons or phones for patients to communicate with nurses. However, these buttons/phones do not offer instant notifications, which can lead to long wait times and patient mistrust of nursing staff. By contrast, YCH wards have been fitted with bedside information terminals that feature touch-controlled nurse call buttons for contacting nurses with a single touch. The electronic messaging system then notifies all on-call nurses, regardless of their location, of the request for assistance via an instant message sent to their hand-held device (mobile phone or tablet PC). Patients wishing to order a meal or adjust their medication no longer have to make in-person requests at the nurses station. With a simple touch of their nurse call button, they can send a message to the nurses' station. The electronic messaging system also reduces the risk of errors or forgotten requests.

Intelligent Hospital Architecture

Introduction

Advantech's iWard solution is an innovative solution-ready package that supports cloud-based services, microservice architecture, statistical expansion, and AI applications and can be rapidly deployed to enable the realization of intelligent wards. Intelligent wards allow patient needs to be rapidly communicated to nursing staff, facilitating the delivery of quality nursing care that improves treatment outcomes and patient satisfaction.

iWard Solution Features

Rapid installation

Scalable integration

Flexible customization

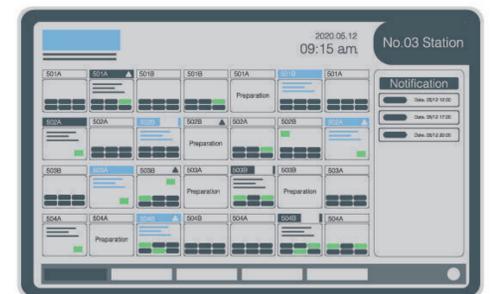

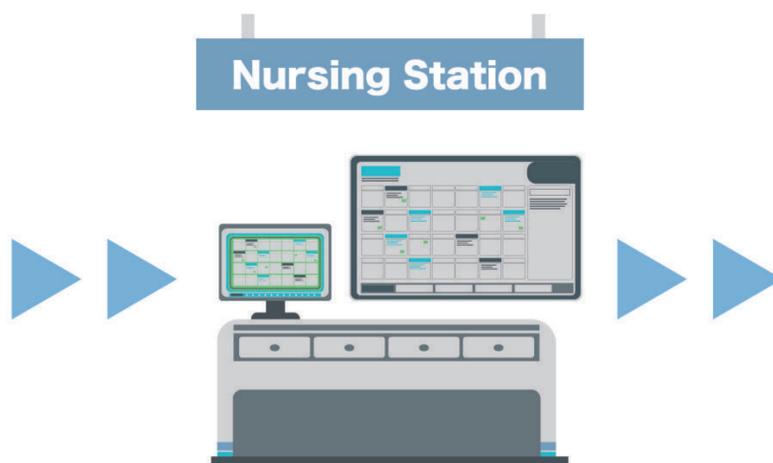

Modularized expansion

Specialized Functions Improve Patient Care

Hospital Admission

Nursing Control Stations enable staff to add or update patient data and bed information.

Nursing Dashboard provide patient information and allow nurses to receive patient requests from Bedside Information Terminal.

Patient Discharge

Mobile Nursing Stations allow patients' vital sign data and medical records to be conveniently updated and managed for efficient in-ward nursing care.

Patients can use Bedside Information Terminals to request assistance. Nurses can access the patient request notification list via the Nursing Dashboard.
