

擇定 1 項亮點產品/技術/服務，將納入國內外年度強打推廣

產品名稱(英文)	Exquisite Ginger Tea
文宣介紹(英文)	<p>The ginger tea of Kemyth is sugar-free and contains green tea and black soybean seed coat. We use is old ginger from Nantou, Ultrasonic crushing and extraction, after multiple filtration to preserve the essence, use freeze-drying technology to retain effective active ingredients. We use 300 kg of old ginger to finally extract 6 kg, which is about 40 times concentrated. Black beans are produced in the Southwest coast, which includes the coastal areas of Yunlin, Chiayi, and Tainan. Concentrated to 30 times with fresh black bean seed coat extraction. In addition to Alishan, there are also Nantou green teas, which are 10 times more concentrated.</p> <p>All the ingredients are concentrated, so the commercially available ginger tea does not have the same conditions as ours. Ginger is a holy product for warming and nourishing. The active ingredients in Ginger are high in active ingredients, which can help regulate body weight, blood sugar and blood lipids.</p> <p>Green tea mainly neutralizes the spiciness of ginger tea. And catechin in green tea is an important health ingredient. The catechin concentration and nutritional value are higher than black tea.</p> <p>Black bean skin is the black gold in beans, rich in anthocyanins, it can help maintain dark vision.</p> <p>And anthocyanins have a double protective mechanism for cardiovascular, assist in regulating blood pressure, and are not easy to form body fat.</p> <p>100% plant-derived, natural and healthy, sugar-free and burden-free, which is quite different from commercially available sugary ginger tea.</p> <p>And the concentrated extraction can completely release the nutrient molecules and absorb them better.</p> <p>Although they are readily available ingredients, however, if you want to obtain the required nutrients from the ingredients, you need to take a very large amount to achieve the required amount. Therefore, the patented extraction of ginger is more efficient than directly absorbing nutrients from the ingredients.</p>

	<p>Everyone knows that the better the basal metabolic rate, the less likely to gain weight. Because the basal metabolic rate accounts for about 65-70% of the total calorie consumption of the human body,</p> <p>Just relying on not eating to lose weight will make the basal metabolic rate drop,</p> <p>Ginger can increase the thermogenesis in the body and increase body temperature, which helps to accelerate metabolism, blood circulation, and increase the basal metabolic rate. Studies have shown that as long as the basal body temperature is increased by 1 degree, the basal metabolic rate will increase by 12%. So summer is also very suitable for drinking ginger tea.</p>
